Applications

ReFresh Full Stack Developer (Project Owner) | <https://ReFresh.herokuapp.com/> !Deployed: Aug. 16th!

A React app that allows gardens or farmers to send out their locations when they open shop.

- ReactJS, NodeJS, Express, MongoDB/JS, Neo4JS, Foundation, Mongoose, Heroku!, npm
- Utilized a state container to maintain behavioral consistency throughout the application.
- Maintained the application integrity while implementing new features and components.
- Visualized stored events from a MongoDB database derived from Google locations.

Pillars Full Stack Developer (Scrum Master) | <https://pillarsproject.herokuapp.com/>

A website/mobile app that allows users who need to speak

- NodeJS, Express, Handlebars, SocketIO, Nightmare, MySQL, Heroku!, npm
- Developed an algorithm that increased productivity by allowing query creation dynamically.
- Integrated multiple chats through sockets for users to define chat preferences.
- Integrated a randomized term search for users with no chat preference.

DiveDen Front-End Developer (Lead Architect) | <https://cphelps987.github.io/Project1/>

A web application that aggregates local dive sites for users to explore.

- APIs, JSON, Scrum, Bootstrap, HTML, CSS, Javascript, jQuery
- Introduced new feature to optimize the application's user experience.
- Manufactured modular front-end components in Javascript to dynamically render events.
